Snowboarding's all about pushing your limits. Level gloves with Biomex wrist protection can help you stay in one piece... so you'll be riding tomorrow instead of seeing the doctor.

Level's proven BIOMEX wrist protection system is the result of an extensive and on-going collaboration between snowboarders, the medical community, and engineers who understand bio-mechanics. BIOMEX research and development is based at the Klinik Gut, Center of Bone and Joint Surgery in St.Moritz, Switzerland, where Level Pros and physicians design and develop the most advanced wrist support technology on the market – THE BIOMEX PLUS. For beginners, the most frequent cause of a wrist fracture in snowboarding is a backwards fall. For more experienced riders it's a front and sideways fall. There are many wrist guards on the market, but based on their design, they don't all deliver the same degree of safety performance.

How do you get hurt?

During a fall your wrist is put in hyper extension (fig.1) (the back of hand is pushed back towards the forearm). In addition to this hyper extension, the wrist often experiences two types of twisting forces technically referred to as pronation (fig.2) and radial adduction (fig.3). It's the combination of these three forces that most often causes a wrist injury such as a wrist fracture.

Most wrist guard systems deal with hyperextension alone, but the BIOMEX system addresses all three of the forces that contribute to wrist injury. Standard wrist guards frequently push the fracture farther up the forearm (fig.4).

Why is BIOMEX a better wrist guard?

BIOMEX (fig.5) is the only wrist guard that keeps the wrist in an anatomically strong position, where muscle-forces and bone congruency combine to provide optimum stability without compromising the freedom to move.

Biomex Self Adjustment 1

The biomex piece can be used with or without removable lining

Double Density Material 2

Higher resistance and better comfort

Shock absorber Material 3

Shock reduction and better fit

Swallow Tail Design 4

New ergonomic shape for better comfort and ease of movement

Specific Women's Fit 5

Specifically designed for women's hands for improved fit and comfort

The effectiveness of wrist guards was demonstrated in a 4 year study conducted by the St.Moritz Orthopaedic Hospital, Klinik Gut. The study involved over 40,000 snowboard hours and more than 2400 participants. The results of the study showed that the likelihood of a wrist injury is reduced 4.5 times using conventional wristguards. With Biomex wristguards, the risk of injury is reduced 7.5 times. Enough with all the technical crap! The BIOMEX system works...straight up! Whatever you are doing there is a glove for you to rock with it built right in, and it is like it is not even there and is not big and bulky like all the others in the market. You can get that added protection and piece of mind while hitting that 80 foot table in the park, the triple kink in the streets of SLC, working on your 1080 in the pipe, or just running the groomers with your Mom. Plain and simple this shit works!!

Heatfit Glove A new standard for comfort and fit

This new system gives the possibility to create a product really customized to the skiers/riders needs.

The padding of the Custom fit gloves is made by breathable thermoformable material that after 180 sec heating at 80 degrees in our dedicated oven are ready to take the shape of every skiers hand.

While heated the client has to wear them for 3/5 minutes and they will keep the shape of the hand. The customization could be repeated.

1

2

3

Benefits for the skier are:

- Customized glove
- Improved comfort
- High sensitivity
- Better grip on the poles

IMPACT SYSTEM

Attenuator & stabilizer of rotation air system.

The main idea is to give to the market a new safety feature that could complete our biomex offer. It will be positioned at a lower target point and could cover different uses in wich biomex is not accepted for its rigid structure.

The product will give to the riders performing in the parks a glove that could support and stabilize their wrist with an acceptable rigidity with a further feature of shock absorber for the palm.

This support is also adjustable directly from the rider depending from his needs or habits; he just needs "to pump it".

Shockabsorber

This new anatomic support in soft PU, is fixed into the glove and can be inflated with the use of a small pump adapting it to the riders needs. A small valve helps to regulate the rigidity or deflates it

Rotation Stabilizer

- Main features:
- Supports and stabilizes the wrist
- Shock absorber for the palms
- Easily adjustable in every moment for every specific need directly from the rider
- Very low constriction

Front view
of the hand
Limited rotation

Lateral view
of the hand
Limited flexion

Gore-tex® 2 in 1 technology

How the GORE technology is built
The GORE® 2 in 1 technology uses nature's best insulator: air. When the hand is in the upper "WARM" chamber, thermal insulation surrounds the entire hand and individually surrounds each finger. This thick padding captures a lot of air, so it can achieve maximum warmth. When the hand switches into the lower "GRIP" chamber, insulation is now only on the back of the hand, where the insulation is compressed. This leaves less air in the padding, thus reducing the amount of thermal insulation. An optimum level of insulation is provided on the palm, fingers and fingertips. This significantly increases both the tactility and the firmness of grip, whilst allowing excess heat to escape easily.

Gore-tex® X-Trafit™

The new GORE-TEX(R) X-trafit Product Technology.
The ideal solution for spring skiing, park and pipe, freeride. For all uses where reliable grip and dexterity are important. Membrane and inner lining are securely bonded to each other, and proprietary grip tape is placed between the insert and the outer material at the fingers and the palm. When taking hold of something with your gloved hand, the layers of material are pressed together and the tape comes into play, preventing movement between the layers. The result: the glove provides optimum grip whenever you need it, and dexterity and comfort when you don't need it. Of course GORE-TEX(R) Gloves with X-trafit Product Technology are also waterproof, windproof and highly breathable.

Gore-tex® xcr®

description

With its exceptional durability, waterproofness, and breathability, Gore-Tex® XCR® is the highest quality waterproof membrane available. It is capable of maintaining the temperature of the hands between 28 and 32 C, regardless of the weather.

benefits

The GORE-TEX® XCR® insert guarantees extraordinary comfort and warmth in a significantly wider temperature spectrum.

Membra-therm plus

description

The insert performs exceptionally well: water resistant..

benefits

Optimizes warmth and comfort by keeping the hands dry.

Windstopper

description

A lightweight fabric that is completely windproof and breathable.

benefits

Comfortable in all weather conditions and temperatures. Its excellent breathability minimizes perspiration.

Thinsulate

description

The unique microfibers of Thinsulate insulation are ten times smaller than the fibers of other synthetic insulations, which means they're much more efficient at trapping air and more effective at keeping you warm.

benefits

Avoids cold spots in your hands filling all multiple air spaces. Thermal benefit.

Polartec

description

Polartec® Power Stretch® fabric features 4-way stretch and it is very breathable. It provides warmth without weight.

benefits

4-way stretch provides unrestricted freedom of movement. Keeps your skin dry when you sweat. Highly breathable. Provides warmth without the weight and bulk of traditional insulating fabrics. Wind resistant to reduce the effects of wind chill.

Primaloft

description

Soft insulation fabric. An insulation that is water repellent! Unlike down, it won't hold water so it keeps you warm even when it's wet!

benefits

Warm and soft feeling offers a good breathability.

Wool

description

Natural material made by thin fibers, this type of wool does not retain odors, making it anti-microbial, as well.

benefits

Wool provides warmth and draws sweat away from the skin, though the gloves feels dry to the touch and increase comfort.

Thermoliner

description

Soft, supple, and less bulky than high-loft insulation. The exclusive blend of fibers traps more air for more warmth.

benefits

Light and soft for better insulation. Very easy to care for.

fit system

description

Perfect balance between sensitivity, warmth and comfort.

description

A looser fit for maximum warmth.

description

Precise, sensitive and stylish.

tech details

Preformed fingers

description

This is a special anatomical construction that permits a preformed shape.

benefit

The preformed shape reduces wrinkles on the palm and guarantees better fit and sensitivity.

H&R

description

Warm and durable finger tips. Round finger tips are more durable and reduce catching on abrasive objects.

benefit

More durability. Warmer finger tips. Better sensitivity.

Breathable system

description

An air exchanger vent placed on the back of the glove that allows moisture to escape from the glove.

benefit

The best solution to keep your hands dry. Improves the drying time of your glove by getting moisture out fast.

Powder cuff

description

This is a long nylon cuff with a convenient adjustment for the closure around the wrist.

benefit

The best solution for riding in powder; the powder cuff prevents snow from getting into the gloves.

Nose wipe

description

Special Windstopper fabric placed on your thumb.

benefit

Provides a gentle feeling when used as a nose wipe while riding or skiing.

Goggle cleaner

description

New design and new suede material. Placed in a very efficient position.

benefit

This new position and construction helps to better clean your goggles in the easiest and quickest way.

Storm leash

description

It is the cord to secure the glove to your hand. It has an effective plastic adjustment.

benefit

A big advantage when you don't want to wear gloves, but want them attached to your wrist.

World finest leather

description

The finest leather in the world.

benefit

Level leather's natural water repellency, durability, and insulating properties guarantee the best performance.

Kevlar

description

Level uses only Schoeller Kevlar, the strongest Kevlar on the market.

benefit

Guaranteed to have the best durability.

Flex palm

description

Elastic cordura insert in the palm center

benefit

Creates a better fit, more flexibility, and a cozy feeling.

Multifunction Pocket

description

Pocket positioned on the top of the glove.

benefit

May be used to insert hand warmers, skipass or other small objects.

Shock Absorber Knuckle

description

Nuckle protection device in fiber-glass material.

benefit

It protects from impacts on your hands.

Guaranteed to keep you warm

Thermo-plus is Level's certification and guarantee for outstanding insulation and heat retention of the natural warmth of the hands. Wearing Level Thermo Plus gloves you can be sure you will have maximum heat retention even in the worst climate conditions.

Level created a test machine able to simulate extreme weather conditions in order to assess its gloves through a series of tests recorded and compared among them.

The results, collected in an efficiency index, constitute a precise measurement of the gloves' thermicity values.

Thermo-plus products' values have to be at least 30% higher than standard gloves's ones.

INSULATION

The use of top quality insulating materials enables the best insulation against the cold.

SHAPE AND BREATHABILITY

A more relaxed fit which gives more space between the fingers creating a thin layer of air, together with the use of top quality membranes enable a better sweat evacuation keeping the hands warm and dry.

+ 30% WARMTH

Maximum warmth is achieved by using the right shape, insulation, and waterproof technology along with meticulous care in production. After testing all its models in its R&D department, Level applies the Thermo-plus label only to those models that test out at least 30% over the standard for thermal regulation.

Level is the first company to introduce the exclusive Kirax system into its snowboard and ski gloves. This innovative technology stimulates the body's neurological system in a unique way to enhance reaction time, performance, and a sense of general well-being.

Kirax Inside the glove

The Kirax Reflex Stimulator has been thoroughly tested and integrated into the design of Level gloves. The design maximizes comfort while gently massaging nerve centers on the back of the hand to jump start the body's reflexes.

What is KIRAX?

KIRAX is a natural Reflex Stimulator.

How does the Kirax Reflex Stimulator work?

Kirax exerts gentle pressure to stimulate the skin's reflex system in a specific joint area where nerves concentrate. The brain instantly receives the increased neurological flow generated by Kirax and responds by delivering increased functional capacity to the nervous system.

Benefits of the Kirax Reflex Stimulator.

Performance and Energy:

- More strength
- More endurance
- Better balance
- Faster reflexes

Well-Being:

- Helps to reduce fatigue
- Helps to reduce pain...during and after sports
- Helps to reduce the risk of injury

When do you feel the benefits of the Kirax Reflex Stimulator?

The Kirax Reflex Stimulator begins providing increased performance, more energy, and a greater sense of well-being immediately. People using Kirax may experience these benefits at different times; some immediately and others over a period of time. Results vary from person to person.

The Discovery of the Kirax Reflex Stimulator.

The reflex stimulator phenomenon was discovered by Dr. André Brossard, a Canadian physician specializing in sports medicine. Dr. Brossard's work confirmed the existence of nerve centers that provide a constant exchange of neurological information between the brain and the body. By stimulating these centers and increasing the flow of neurological information to the brain, he discovered a marked improvement in the body's performance, including more strength, increased endurance, better balance, faster reactions, and less pain from injuries.

**The Kirax Reflex Stimulator

Kirax inside the glove

The Kirax Reflex Stimulator has been thoroughly tested to provide the perfect shape, flexibility, and stimulation pressure for maximum comfort and freedom of movement.

FUSION is a crossover range that unites all the technical and construction characteristics of snowboard gloves: reinforced palm and finger zones; breathability but also warmth; softness and comfort typical of ski products.

This Line is inspired by the new movement in skiing and snowboarding; it is the results of Level riders requests. The new Rocker's models represent the continuation of a leadership in this important segment of cool, functional and innovative products.

Multifunction gloves designed to perform at its best for snowboard and skier freestylers and freeriders. Among the athletes who contributed to develop this line you can find: Xavier Bertoni and Kevin Rolland winners of the X Games, Jon Kooley, Jp Tomich, Janne Korpi, Chris Dufficy, Jp Auclair, Tanner Rainville and Matt Philippi.

A new patent shape "the rocker fit" is the last invention of our team. After the trigger and the lobster shape we have invented the rocker shape for the fun of this segment joining the hype of this special world.

The Fusion line introduce many new or restyled models which are the expression of freestyle and freeride. A new special model is the Hely, studied to get the best features to freeskiers in all conditions.

SNOWBOARD > GLOVES

Level’s range of SNOWBOARD gloves has always been considered the most comprehensive and innovative on the market and this year the 11-12 collection features many improvements in terms of image and technical features.

Biomex-Plus system is among the applied technologies. The fruit of four years’ research in partnership with the Klinik Gut of St. Moritz, Level has devised a special inner glove to provide greater protection for the wrist in snowboard accidents. Tests have shown that snowboarders using Biomex protection are seven times less likely to suffer wrist injuries. With the new Biomex self adjustment, the biomex insert can be used in all conditions, with or without removable lining.

Taking inspiration from snowboard trends and from the street world, new patterns have been introduced in Freeride line, making this line fresh and easy to match with winter clothes. The feature is a more streamlined, rounded finger design, which differs from the usual squared fingers’ tips.

Highlight of this season, the revolutionary Impact System: using a tested air-inflated device, it solves one of the most common problems encountered by riders, that is the need for wrist support and the reduction of impact on snow during manoeuvres in the park and on half pipes.

The new and innovative Level ski poles collection expand from the freestyle and free ride segments into ski racing and performance.

The aim of this collection is to improve the functionality between hands and poles and the unique style of Level design.

Level uses on most of its models the Biomatrix & Click system, characterized by a quick-release strap, than can be easily released simply by pushing the button at the top of the grip and it can be regulated to maximize control.

Thanks to special construction technologies used and to special studies on geometries and surface treatments, poles present a special aerodynamic profile that guarantees stability and balance, to obtain a high-performance product.

An example of innovation is the revolutionary design “four-leaf clover shape” designed to minimize weight and maximize strength and performance

SKI > POLES

BIOMATRIX & CLICK

INTEGRATED GLOVE *system*

Ergonomics and lightness combine to frame a new concept of skiing comfort: the brand new CLICK strap system the only one on the market to be metal-free- improves the comfort of Level's latest grip model: BIOMATRIX. This futuristic grip features a quick-release strap and is 30% lighter than any other previous model. The strap can be easily released simply by pushing the button at the top of the grip.

STRAP *system*

A natural finger movement
to fasten or unfasten.

A special study on constructional geometries and surface treatments for obtaining a high-performance product. Together with the perfect balance of weight and high stability.

Easy to click in and out.

The maximum traction capacity of the system is 35 kilos. Over this limit, it opens, thus releasing the hand in case you fall or your pole gets stuck.

No rust (no metal parts inside).

The strap has a dual adjustment to maximize control.

The strap does not block because of snow.

Test on glove resistance confirm optimum durability.

The hand feeling is to have the strap integrated in the glove.

A special study on constructional geometries and surface treatments for obtaining a high-performance product. Together with the perfect balance of weight and high stability.

- A special aerodynamic profile, decreases wind resistance and increases resistance to front impact. The “tear drop” shape also provide a unique balance.

Adjustable height system

Special clover-leaves shape
